

Your Trophy Mount is **INSECT-PROOFED** with **MOUNT MEDIX**

First Class Trophy Taxidermy is an
Authorized Mount Medix Taxidermist

1 Year Guarantee

Your trophy mount, produced by First Class Trophy Taxidermy from 1st January 2022, is so effectively treated against insect attack, that we give you 1 year guarantee that no damage from insect attack will happen to your trophy mount. And that counts for all kind of trophy mounts: mammals, birds, reptiles and amphibians. If, unexpectedly, damage from insect infestation should occur within 1 year from the delivery date of the mount, the warranty will cover a repair damage or if a repair is not possible, a full refund of the amount paid for the taxidermy work.

Lifetime protection & maintenance

After the end of the warranty period, we can offer you a Mount Medix solution for lifetime protection & maintenance

New regulations – new solutions

In the "old days" Arsenic and Edolan U were very effective but highly toxic methods of insect prevention in the taxidermy industry. These materials have been used for decades, but due to changes in regulations, they are not legal to use in taxidermy anymore. But the need for prevention is still there, and perhaps even stronger as we see a fast-growing insect problem due to global warming?

Normal insecticides and bug repellents are usually harmful to people, have a displeasing odour and can leave stains on the hair. They are not recommended for taxidermy mounts.

During the production of your taxidermy mounts, we use the well-proven Mount Medix technology that ensures that we deliver an insect-free taxidermy mount to you. **The treatment is a combination of several processes and products following the guidelines from the world's leading specialist in insect protection and - extermination in the taxidermy industry.**

Horns & Antlers need professional treatment and a lot of experience.

One of the biggest challenges for many antelope horns is to perform an effective treatment against insect infestations.

Horn & Antler “bath” with Mount Medix Pre Soak

We give all horns and antlers a “bath” in a Mount Medix Pre Soak solution. In many cases, there will be some tissue in the horn cavity that will be odorous and also attract bugs, especially dermestids. A 48-hour soak will help remove the bad odour and kill any insect that might be present.

For the species with “boss” there can be large cavities under the boss. These cavities must be completely cleaned of cartilage and keratin so that insect larvae do not “enjoy” themselves in there and suddenly appear as crawling and flying insects with a subsequent risk that they will start to eat the skin or/and eat the keratin in the hair roots with the consequence that the hairs start to fall off the skin and leave hairless spots.

We also do injection/rinse to numerous of other species where the horns can come off the inner-horn, like, Sable, Kudu, Oryx, Ibex etc. For some species, like Buffalo, we seal all gaps surrounding the horn and skull with a material like epoxy or body filler. After this material hardens, we drill very small holes into the horn cavity and inject the Mount Saver Hoof and Horn into the cavity. The Hoof and Horn are formulated to penetrate the tissue that may be present and prevent insect damage.

After injection, the hole is permanently closed with epoxy and painted in natural colour. After airbrush painting the “surgical procedure” is invisible

Especially the Muskox boss has a complicated structure with myriads of hollow “pockets”, where insect-larvae can live on the remaining cartilage and protein. Our treatment, including the injection of Mount Medix Horn & Hoof, will keep this free of insects / larvae.

Injection of Mount Medix Saver Horn & Hoof with extremely potent natural insecticide

As with the horn cavities, removing all soft tissue from a hoof and feet can be impossible. A small application of Mount Saver Hoof and Horn (injection) can prevent future insect damage.

The mount and skin are insect-proofed through a 3-Step process.

This is the first step in the Mount Medix long-term taxidermy insect protection program. The Mount Saver Glue Additive is mixed into the glue, which adheres the skin onto the mannequin - deep inside insect protection. The adhesive will encapsulate the Mount Medix active, creating a time-released mechanism for bug prevention.

The Mount Medix Pre Soak additive is mixed into the water that is used to rinse the skin before mounting. Ensures an "all-through-skin" protection.

For bird taxidermy, we use the Mount Saver Powder.

Formulated to replace BORAX (partly or full). We coat the bird skin with this powder before mounting and this will provide maximum insect proofing in bird mounts.

All mounts and tanned skins get a treatment with "Mount Protector". This product contains high-quality hair and hide conditioners to protect the mount, siliconized oils for easy dusting and no residue formation, plus it contains the Mount Medix active insect ingredient to keep mounts from being damaged by moths and dermestids.

Insect Protection for the base / habitat

To protect habitats/bases made of natural habitat materials like moss or grasses we use the Mount Saver Powder. The Powder is sprinkled onto the habitat materials, and we tap lightly to remove the excess powder.

Besides the anti-insect treatment, all mounts and dry tanned skins (flat skins) can be treated by us with Mount Medix's "Taxidermy Fade Protector". It will prevent the colour-fade or yellowing that occurs with all mounts as they age and are exposed to natural and artificial light. Since colour change is a relatively slow and irreversible process, most people don't realize it's occurring until it's too late.

Maintenance program with life-time protection

In addition to the treatment that your taxidermy mount undergoes in the production process, we also offer our customers a Mount Medix maintenance program where you, with an "easy-to-do" annually (or semi-annual) treatment, can maintain your taxidermy mount in perfect condition and prevent insect / bug attack throughout its lifetime. You can buy the Mount Medix products on-line for follow-up / maintenance treatment. The products are available from stock in USA and in Europe. Read more and buy Mount Medix products here:

USA: <http://mountmedix.com>

Europe: <http://mountmedix.eu>

Our clients receive a certificate "Insect-proofed Taxidermy Mount"

When you receive the finished taxidermy mount from First Class Trophy Taxidermy, you will receive an official signed certificate as your confirmation that the mount(s) have been treated with the full 3-Step Mount Medix insect-protection.

In addition to the treatment that your taxidermy mount undergoes in the production process, we also offer our customers a Mount Medix maintenance program where you can maintain your taxidermy mount in perfect condition with and "easy-to-do" annual (or semi-annual) treatment and prevent insect or bug attack throughout its lifetime.

Mount Medix LLC is a company founded in the USA to provide high-quality natural products to the taxidermy industry.

Created by scientists and professional taxidermists – laboratory tested with documented effect

The Mount Medix product line was created by leading natural product development scientists in conjunction with professional taxidermists to accommodate the needs of the taxidermy industry. The philosophy behind the Mount Medix concept is as simple as it is ingenious: Protecting the taxidermy mount against insect attacks through cleaning solutions & eliminating the mount as a food source for insects and their larvae. These products have been thoroughly tested in the laboratory and have been professionally and privately used to protect and treat insect infestation in taxidermy mounts and trophy rooms in the USA for more than 10 years.

Made from high-quality natural products - no pesticide licence needed

The entire Mount Medix product program can be purchased and applied without a pesticide licence. The products are easy to use and leave behind a pleasant odour.

It is hereby confirmed that the taxidermy mount(s):

TAG No: 152.480

completed for client, Name: Hannibal Eberhardt

is anti-insect treated according to the specification from Mount Medix.
