

## Eye Polish and Cleaner Technical Bulletin & Instructions

**About:** The Mount Medix Eye Polish and Cleaner are specially developed for the taxidermy industry for the specific purpose of making the glass and polycarbonate eyes looking natural and real. Its main purpose is to clean the eyes without streaking so they appearance and sparkle of a natural eye. The Eye Polish and Cleaner also contain carnauba wax, just like high-quality automobile polish to make future cleanings easier while maintaining the "natural sparkle".

### **Applications:**

**Professional Use** - The Eye Polish and Cleaner can be pre-applied to eyes before they are installed by the taxidermist. This is accomplished by laying the eyes on an absorbent pad and misting them thoroughly with the product. Let the eyes dry and repeat the process. After two coats, the eyes can be installed into the mounts and will clean much easier than standard untreated eyes. In most cases, paint overspray, clay and glue will wipe off with a cotton swab wetted with the cleaner. After wiping heavy residue away with an initial swab, wet a second swab and polish the eyes for finishing.

**Client Use** - Eye Polish and Cleaner can also be used by taxidermy owners to remove dust, soot, smoke residue and other unwanted material that could be adhering to the mounts' eyes. The process is very simple, first wet a cotton swab with the cleaner and make an initial wipe of the eyes to remove heavy unwanted residue. Dampen a second cotton swab with the product polish the eyes to a like near, natural sparkle.

**Shelf Life:** Greater than 5 years

### **Available sizes and usage:**

The Mount Medix Eye Polish and Cleaner is available in both 59 ml and 118 ml bottles with a mist sprayer attached. They should clean 100 and 200 sets of eyes respectively, depending on the level of initial cleanliness.
