

## Mount Saver Powder Technical Bulletin & Instructions

**About:** The Mount Medix Mount Saver Powder is another product designed for professional taxidermist use. The product is a blend of the Mount Medix active and different types of diatomaceous earth.

**Applications:** The Mount Saver Powder was initially designed to be used with or completely replace Borax in bird taxidermy. However, since its introduction to the taxidermy industry, several other uses have become commonplace. The first would be to add the Powder to the chopped corn cobs, peanut shells, sawdust of other materials normally used in tumblers. The addition allows the hair or feathers and the hide to absorb some of the Mount Medix cleaning active. But the addition of the powder to the tumblers will keep insects out of the tumbling media. Another use is to put some powder inside horns prior to reattaching them to the cores during mounting. By placing some of the powder in the cores it protects against dermistids in case there is some tissue remaining inside the horns. Another common use is in natural habitat materials like moss or grasses. Just sprinkle some powder onto the habitat materials, tap to remove excess

### Example Uses

**Bird Taxidermy:** Formulated to replace borax in bird taxidermy. Apply enough powder to coat the skin. The powder can be used in a 50/50 mix with BORAX when mounting birds and still provide the maneuverability of the skin that 100% BORAX provides. If maneuverability is not a concern than 100% powder can be used and will provide maximum insect proofing in bird mounts. The powder will eliminate the skin a food source for insects and larvae.

**Tumbler Additive:** Add 2,5 dl of powder for every dry 4 liter of material.

**Horns:** Liberally apply to the inside of the cavities after all tissue is removed and before reattachment to the core. Typically, a tablespoon in each horn is adequate for long term protection

**Habitats:** Use to dust habitat areas, like moss, grass and dirt, to eliminate the material as a food source for insects and larvae

**Hide Storage:** Can be used for tanned or salted skins that are being stored.

**Shelf Life:** Greater than 5 years

### **Available sizes and usage:**

The Mount Medix Mount Saver Powder is available 0,340 kilo Ready-To-Use
